

Hair Removal Technology

Description of Technology

Method and composition for the removal of unwanted body hair from animals using an enzyme or enzyme mixture. This is a patented technology with related and improved inventions subject to further provisional filings.

Commercial Applications

Veterinary applications include the removal of hair for hygiene, surgical or cosmetic purposes. Rights for the use of this technology for sheep in Australia have been granted. We now wish to licence this technology for other veterinary applications. Human applications are also possible (they require further development and testing by expressions of interest are welcomed).
