

How to upload a whole website into your *MyUni* course

In MyUni you can embed a whole website or any set of self-contained HTML pages into your course using the ‘*Unpackage this file*’ option.

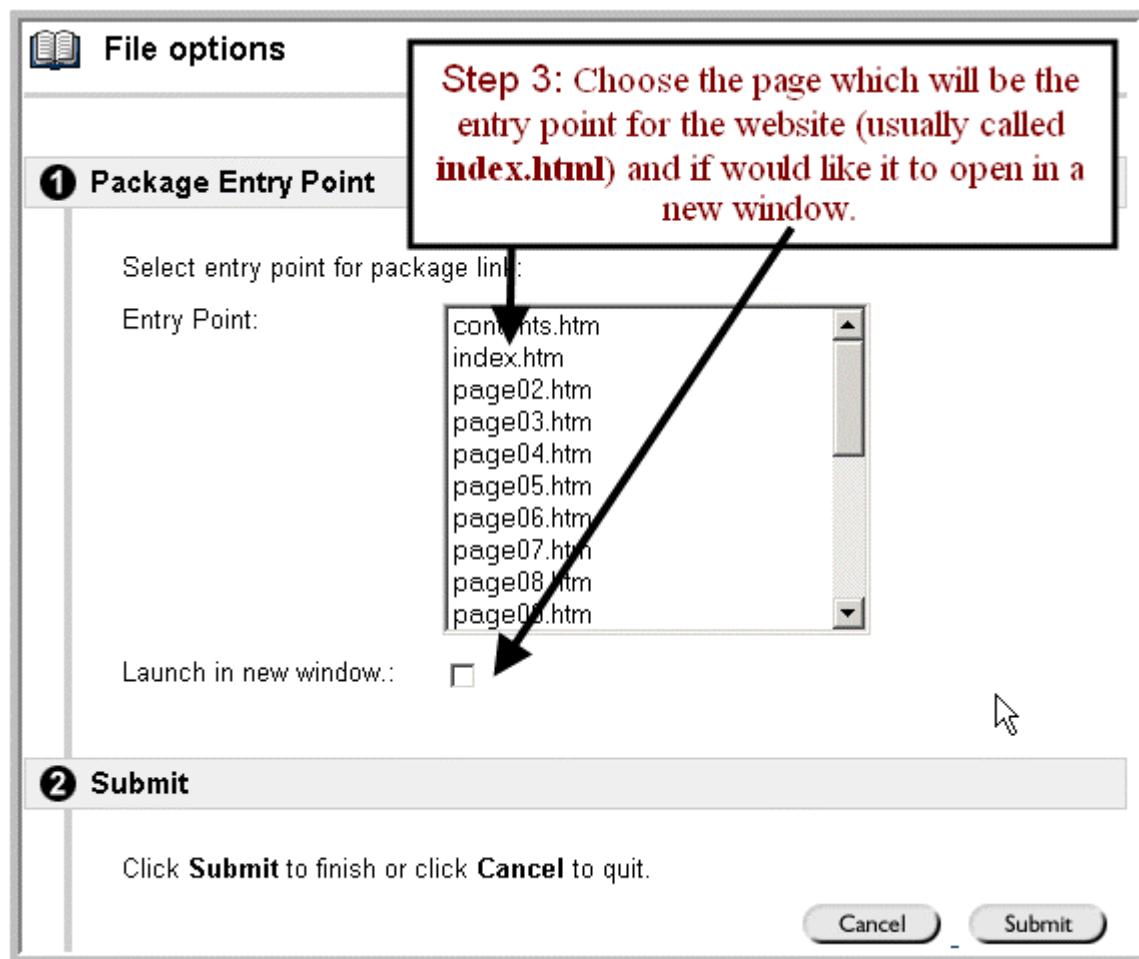

Step 1: Create a zip file containing all the files and folders that make up website. To do this, select the files, right mouse click and select ‘Add to [folder_name] zip’

Step 2: Add an item in your *MyUni* course and link to the zip file, choose the **Special Action** to ‘**Unpackage this file**’ then press the ‘Submit’ button and you will be taken to a second screen of options.

Step 3: Choose the home page (index) file as the first entry point for the website and whether you would like the site to display in a new window or not, then select ‘Submit’, then ‘OK’

Your website should now appear as an item in *MyUni* of type ‘Package file’.
