- Development of links with a company

Project Title

Online Systems Tool Research, Scoping and Development

Objective

The objective is to:

- Research online formats for the company's existing Systems tools to enable them to be packaged into online tool(s) for clients.
- Scope the development of the online tool(s)

PASSION

FOCUS

GOALS

POSSIBILITIES

BELIEVE

ACHIEVE

- Develop the online tool(s)

The desired outcomes are in three stages:

- to have adequate research completed allowing a clear direction to be chosen for the online format
- to have a complete and comprehensive scope completed that would allow the development of the online tool(s) to move forward effectively and efficiently either internally or with an external service provider
- to complete the 'beta' operating version of the online Systems tool(s)

Project Specification & Timetable

Tasks Required include:

- Research of Data Management Systems, formats, benefits, limitations
- Reporting on research
- Develop a work scope for the online tool(s) development incorporating industry standards and practices
- Documenting steps followed in each phase
- Assistance in selection of supplier for development, OR development of the online tool(s) in-house

The overall project scope will be determined by progress achieved against the objectives, timing suitability for both parties, skills and alignment of the person selected. Initially there is work for 2 days per week commencing November 2007 after exams.

Personal Requirements

- Solid understanding of the internet, internet functionality, web programming
- Understanding and application of web programming principles and structures
- Enthusiastic, Wanting to learn & share knowledge
- Well developed communication & English language skills
- High level computer skills

Academic Qualifications

- Studying at a minimum of 3rd or 4th year level either Computer Science/Computer Engineering.
