Introduction

This guide will assist you in connecting to the eduroam network, which allows you to connect to over more than half of Australian universities with your UofA credentials. **It is important to note that the username for this network is slightly different than your normal UofA wireless credentials.**

*It is strongly recommended that you connect to the eduroam network while on a UofA campus before attempting the connection elsewhere.*

Procedure

1. Ensure you are at your desktop by pressing the Windows Key whilst in the start screen.
2. Click the Wireless icon in the taskbar (bottom-right)
3. Select eduroam from the wireless list
4. Press Connect
5. When prompted to log in, enter your University username followed by @adelaide.edu.au (e.g. a1234567@adelaide.edu.au)
6. If you are prompted to continue connecting, press Connect.

You will now be connected to eduroam and will be able to access wireless when at another participating University (see [http://www.eduroam.edu.au/where-is-eduroam.html](http://www.eduroam.edu.au/where-is-eduroam.html) for a complete list)
