

WHICH NUMBER WHERE

SETTING UP:

1. Each player take a sheet, and without letting the other player see, write the digits 1-8, each in a separate box in the "MINE" grid. There will be eight empty boxes.
2. Fold along the centre line, tear/cut from the edge to the vertical lines, then fold back along the vertical lines. Put the upright parts together back-to-back to form a stand between the players.

HOW TO PLAY

3. There are six rooms in the grid. You need to find out which room each of the other player's eight numbers are in. (It does not matter which box within the room each digit is in.)
4. On your turn, ask any Yes or No question to the other player. The other player answers your question truthfully. You can write notes in response anywhere on the paper if you like.
5. If the answer is Yes, then you get to ask another question. If the answer is No, then it is the other player's turn.
6. On your turn, if you think you know where the other player's numbers are, ask one at a time if each is in the location you think. If the answer is Yes to all eight questions then you win!
