

2014 UNIVERSITY EXPERIENCE SURVEY FACULTY OF SCIENCES RESPONSE

Teaching (communication, feedback)	Biological		More feedback, better supervision more consistency between teaching staff and courses.		Individual situations of poor experience. Hard to know if widespread (see other area's data). Feedback can always be improved but can never satisfy everyone.
	Physical		Similar responses to 2013 include: both timing and quality of feedback on work often just a mark with no feedback, better communication by teaching staff with students, length of time it takes for academic staff to respond to student emails. Difficult to tell if there is an improvement but similar responses suggests room for improvement in these areas		
	SAVS		We will continue to use SELT data to try and improve organisation and to highlight specific issues with instructors.
