

IT ACCEPTABLE USE PROCEDURES

OVERVIEW

These Procedures support the IT Acceptable Use and Security Policy by;

- Clarifying the responsibilities of users of University IT, and
- Prescribing how breaches of the Policy and this Procedure will be handled.

Definitions

Class 3 data refers to University data that is classified as Class 3 under the [University's Information Classification and Handling Guideline](#) (i.e. there would be serious consequences to the University if security of the data were compromised).

University data means data generated by or on behalf of the University or otherwise within the University's custody.

All other defined terms have the same definitions as used in the IT Acceptable Use and Security Policy.

1. Acceptable and Unacceptable Use of University IT

Responsibility: All Users

1.1 Users of University IT must;

- a) Use University IT in a lawful, ethical and responsible manner for the purpose of supporting their learning, research and administrative objectives.
- b) Comply with all relevant laws and regulations including, but not limited to:
 - i. Criminal Code Act 1995 (Cth)
 - ii. Tertiary Education Quality and Standards Agency Act 2011 (Cth) (TEQSA Act) ss 114A and 114B
 - iii. The Privacy Act 1988 (Cth)
 - iv. The Spam Act 2003 (Cth)
 - v. The State Records Act 1997 (SA)
- c) Comply with all relevant University Policies including, but not limited to:
 - i. Academic Integrity Policy
 - ii. Behaviour and Conduct Policy (staff and titleholders)
 - iii. Code of Conduct (staff and titleholders)
 - iv. Information Management Policy
 - v. Privacy Policy & Management Plan
 - vi. Risk Management Policy
 - vii. Student Misconduct Policy (students)
- d) Comply with the terms of use that apply to particular software or services.
- e) Undertake security awareness training and education commensurate with the User's responsibilities as determined by the University. Continued non-compliance with this requirement will constitute a breach of this policy.
- f) Maintain the confidentiality of any personal or confidential information accessed via University IT.

1.2 Users must not use University IT;

- a) To create, send, store, upload, access, use, solicit, publish or link to:
 - i. Offensive, obscene, profane or indecent images or material.
 - ii. Material that is threatening, violent, abusive, invasive of another's privacy, hateful, harassing, bullying, discriminatory, defamatory or otherwise objectionable.

- iii. Misrepresentative and/or misleading material.
 - iv. Material or copies that infringe the copyright or other intellectual property of another person or organisation.
 - v. Malicious software such as viruses, trojan horse, worms or address-harvesting software etc.
 - vi. Providers or websites that provide, arrange, enable, encourage or promote academic integrity breaches
- b) To gain any inappropriate personal, academic or other advantage.
 - c) To manipulate University data without authorisation.
 - d) To conduct personal business or unauthorised commercial activities.
 - e) For any illegal activity such as cyberstalking, identity theft or attacking other computer systems.
 - f) In a manner that would cause the University to be in breach of its legal or contractual obligations.
 - g) To forward electronic materials without the express or implied permission of the material's creator.
 - h) To access peer-to-peer file sharing software for unlawful purposes.

1.3 The following must be observed concerning use of University IT:

- a) Staff are expected to utilise only approved University IT (Centralised, Specialist or Distributed IT) that have undergone an IT due diligence assessment process conducted by ITDS and have been certified for use according to the classification of data that is to be stored and processed, or a formal exemption has been granted.
- b) Development and acquisition of new University IT, including purchase of software and cloud-based systems, is only permitted in accordance with rules set out by ITDS to ensure:
 - i. They align to architectural principles
 - ii. They do not duplicate with existing University IT
 - iii. Risks, including information security risks, have been assessed, mitigated or accepted and documented
 - iv. Contracts have been reviewed and approved in accordance with the Contract and Agreement Policy
 - v. Supplier is selected in accordance with the Strategic Procurement Policy
 - vi. Clear support arrangement + business owner and custodian are defined
- c) The only mode of remote access to the University network is using one of the authorised by the University that that use multi-factor authentication (MFA). Use of desktop remote access software to gain remote access to University IT connected to the University network is strictly prohibited.

2. Device Security

Responsibility: All Users

- a) Staff are expected to use a standard operating environment (SOE) endpoint device for conducting University business unless exemption have been granted by the Head of School and ITDS.
- b) SOE devices must have the following restrictions in place:
 - i. Users do not have local administrative privileges unless required for work and authorised by ITDS and Head of School.
 - ii. Users must not circumvent security controls and configurations on SOE.
 - iii. Users must not install unauthorised and/or unlicensed software.
 - iv. Users must restart their SOE device when prompted to do so in a timely fashion in order complete installation of updates.

- c) All BYOD including University-funded devices that are not SOE devices managed by ITDS that connect to the University network and/or store University data must be configured to mitigate the risks of compromise and data loss as follows:
 - i. Passcode or password must be configured on device with automatic screen lock enabled after a period of inactivity.
 - ii. Security software such as antivirus and personal firewall must be installed and configured.
 - iii. Only operating system versions that are supported and maintained by the manufacturer must be used.
 - iv. Operating system and applications should be kept up to date with latest updates and security patches.
 - v. Only digitally signed software with appropriate licenses from trusted sources is to be used.
 - vi. Storage encryption and “remote wipe” features should be enabled for mobile devices when available
- d) Any BYOD that does not meet the above security criteria or otherwise deemed to pose threat to the security of University may be restricted from connecting to the University network.
- e) To reduce risk of unauthorised use of their device, account holders are strongly encouraged to either log off or leave screensavers locked when leaving their devices unattended.
- f) Devices that are compromised by a malware or determined to pose threat to the security of University IT and other users, may be blocked from connecting to the University network until the sources of threats have been removed.
- g) Devices containing University data, including computers, smart devices, and mobile storage devices must be erased in a secure manner as determined by ITDS to render any University data previously stored on the hardware illegible and irretrievable before being sold or otherwise disposed of.

3. Account and Password Security

Responsibility: All Users

- a) Users are accountable for ensuring the security of their University login and protect against unauthorised use. In particular:
 - i. A strong and complex password that complies with the current password policy (refer to IT Security Procedures for the current policy) that is not used with other online services must be chosen
 - ii. Multi-factor authentication must be configured on user’s account
 - iii. Password must never be disclosed to or shared with others
 - iv. Password must be changed when there is a chance that it has been compromised or become known to others
- b) Users must prove their identity by showing a valid photo ID (either in person, or over a video call) when asking an IT support staff to perform one or more of the following actions:
 - i. Reset the password to a temporary password
 - ii. Modify the secondary email used for password recovery
 - iii. Reset (erase) all existing multi-factor authentication factors for the purpose of enrolling a new factor
- c) Users must not use other people’s accounts or otherwise impersonate other users to gain access to University IT.
- d) When an access to a University IT is no longer required by the User or their direct reports, then User or their supervisor should contact the ITDS to ensure redundant access is removed in a timely fashion.
- e) Line managers are responsible for ensuring that access of their direct reports that become redundant (for example after changing roles and responsibilities) are removed as soon as possible.

- f) Business owners are accountable for performing periodic reviews (at least annually) of access to University IT that they own to ensure that access granted to users remain current, and any excessive access is removed.
- g) Prior to the account holder's IT account being disabled, it is the account holder's responsibility to ensure that all files and email messages on their account are stored in accordance with the Information Management Policy.
- h) Where an account holder is unable to comply with Procedure 3f before leaving the University (for instance, due to illness or death), the relevant supervisor of that account holder may request that the Chief Information Officer arrange for a nominated University account holder to be granted access to view and deal with the records associated with the account before it is disabled.

4. Data Security and Quality

Responsibility: All Users

- a) All electronically held University data should be stored in such a way that it is backed up regularly; usually by saving it on a network drive that is backed up nightly.
- b) Handling of sensitive or confidential University data should align with the [University's Information Classification and Handling Guideline](#).
- c) All University data should be captured and maintained in a manner that ensures its quality and integrity.
- d) All electronically held University data should be captured, stored and disposed of in accordance with the Information Management Policy and Research Data and Primary Materials Policy (in the case of research data).

5. Reporting IT Security Incidents

Responsibility: All Users

All University IT users must:

- a) Report IT security incidents, including weakness or threat to University IT, suspected or actual intrusions, unauthorised access, or other breaches of the IT Acceptable Use and Security Policy or these Procedures to Technology Service Desk on 8313 3000 or via this [form](#).
- b) Report lost or stolen IT equipment that could provide access to University IT and/or class 3 data to the Technology Service Desk as soon as possible. Where the potential exposure of University class 3 data may be in breach of privacy or other obligations owed by the University to a third party, this should also be reported to Legal and Risk via heldesklegal@adelaide.edu.au.

6. Procedure for handling breaches

Responsibility: ITDS

- a) If an alleged breach of the IT Acceptable Use and Security Policy or its associated Procedures by a User is detected by or reported to Information Technology & Digital Services (ITDS), ITDS will refer the alleged breach to the following persons for a decision on what further action should be taken in respect of the User:

Alleged breach by:	Notify to:
Staff or titleholder	Relevant Head of School or Branch / Area Manager
Student	Executive Director, Student Experience
Visitor account holder	Person who authorised the visitor account
Staff of Controlled Entity	General Manager (or equivalent) of the Controlled Entity

Staff / student or third party entity (for whom University IT is provided as a service under contract)	University contract manager responsible for that contract
--	---

- b) Where the alleged breach presents a risk to the University, ITDS may implement immediate technological measures to mitigate the risks.
