

Clear Stored Passwords from Keychain Access

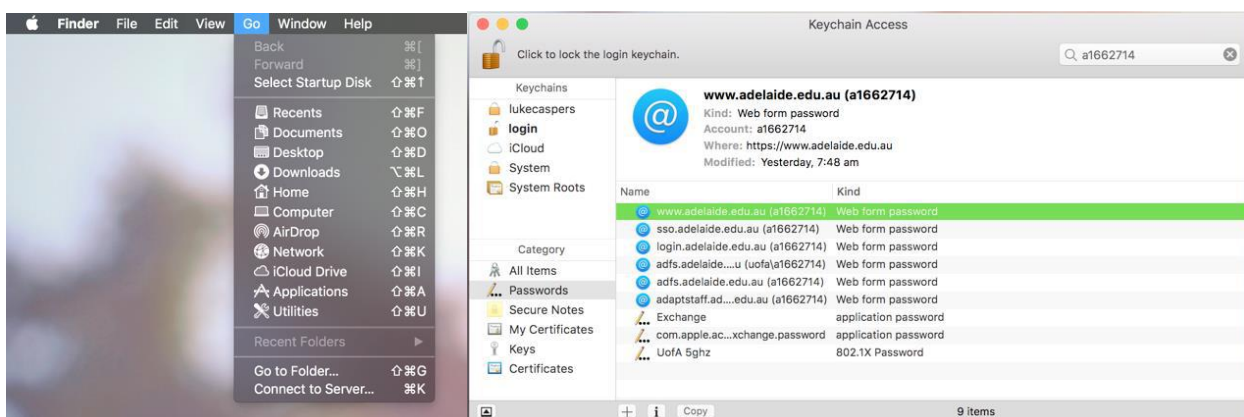

Introduction

This guide will step you through the process of removing stored password from Keychain Access

Procedure

1. Click on Go in the Menu bar at the top of the screen and then click on Utilities
2. Find Keychain Access in the list and double click on it to open it up
3. Select 'login' under Keychains on the right-hand side, and under Category; select 'Passwords'
4. Use the search field in the top right of screen to search for your A Number/UserID (eg. A1234567), email address (eg. first.lastname@adelaide.edu.au), 'UofA' and 'Adelaide'.
5. Right click or Ctrl + Click to delete as required.

You will now be prompted to enter your password when you attempt to access a University system that requires log in – for example accessing external internet sites will require you to authenticate to the proxy server with your new password.
