

## Ubuntu Linux: Connecting to the VPN

### Introduction

This guide details the process for connecting to the VPN on an Ubuntu Linux machine.

Your mobile device must be linked to DUO two-factor authentication in order to receive the second password which is required to be able to login to the VPN, please see [this](#) guide for further information.

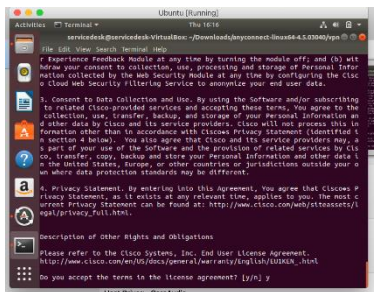

### Process:

1. Download the VPN from [here](#)
2. Place the file in the 'Downloads' folder on your machine and extract the contents, then open Terminal and run the following commands one at a time.

```
cd /home/*username*/Downloads/anyconnect-linux64-4.5.03040/vpn  
$ sudo ./vpn_install.sh
```

3. Accept the Terms and Conditions when prompted, then run CISCO Anyconnect from the Applications menu.

4. Connect to the VPN using the following credentials:  
**Address:** vpn.adelaide.edu.au  
**Username:** (University ID Number e.g. aXXXXXXX)  
**Password:** (University Password)  
**Password:** (The 6-digit code from the DUO APP, alternatively use 'SMS' to trigger a new set of codes to your mobile.)

If you experience any issues or require further assistance please contact the Service Desk on 8313 3000 or [servicedesk@adelaide.edu.au](mailto:servicedesk@adelaide.edu.au).
